

Simple Snowflake

Crafter level: Easy
Time needed: 5 minutes

What you'll need

- Printout of 1 simple snowflake on blank copy paper
- Scissors
- Tape (optional)
- Small hole punch and string (optional)

How to make it

1. Cut around the outside solid lines on your copy paper printout to make a square.
2. Fold the square corner to corner twice, creasing along the dotted lines on the outside of the snowflake design, to form a triangle.
3. Then, fold the triangle into thirds, following the dotted lines to form an arrow shape. See Diagram 1.
4. Now, cut along the solid lines of the snowflake with your scissors, through all layers.
5. Open it up and admire! Then, tape it to a window or hang it from a string (optional).
6. Make lots more.

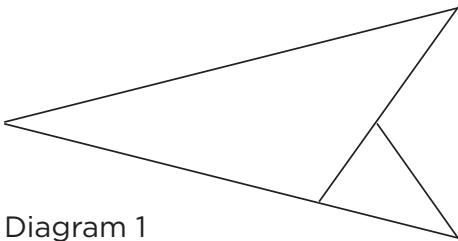

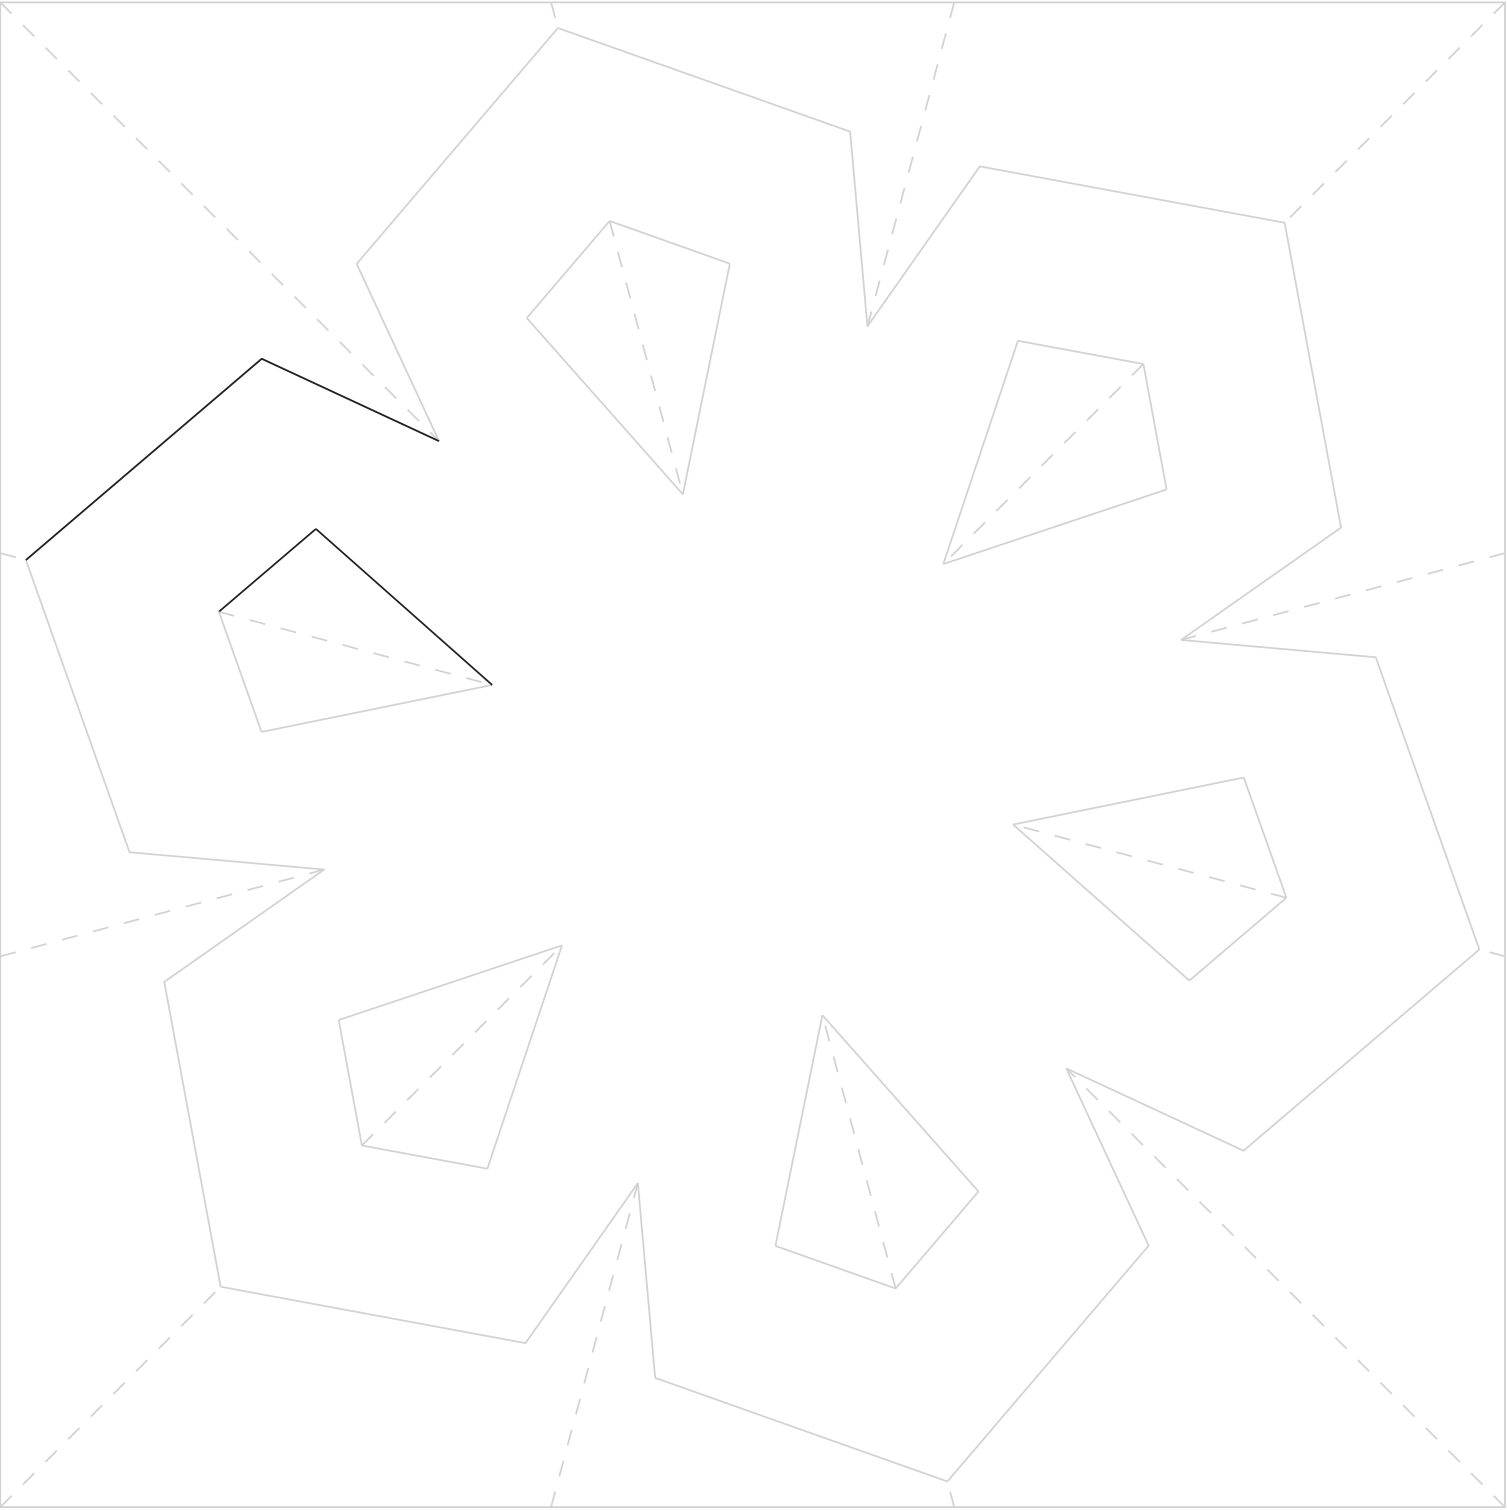

Diagram 1

Tip: Once you get the hang of it, you can make small, colorful snowflakes by reducing the template size when you print it out and using origami paper.
