

# Starburst Snowflake

Crafter level: Easy  
Time needed: 10 minutes

## What you'll need

- Printout of starburst snowflake template on blank copy paper
- Scissors
- Tape (optional)
- Small hole punch and string (optional)

## How to make it

1. Cut around the outside solid lines on your copy paper printout to make a square.
2. Fold the square corner to corner twice, creasing along the dotted lines on the outside of the snowflake design, to form a triangle.
3. Then, fold the triangle into thirds, following the dotted lines to form an arrow shape. See Diagram 1.
4. Now, cut along the solid lines of the snowflake with your scissors, through all layers.

For more fun, make a second snowflake using steps 1–4 and follow these next few steps to make a double-sided snowflake.

5. Open them both up and place one snowflake on top of the other, printed sides facing each other.
6. Turn the top snowflake about 30° clockwise. (If you imagine a clock face, align both snowflakes, then move the top snowflake from the 12 o'clock position to the 1 o'clock position while keeping the bottom snowflake at 12 o'clock.) The top snowflake's tips should line up to the open area between the tips of the bottom snowflake.
7. Press the tips of the top snowflake into the space between the tips of the bottom snowflake on all sides. Voila! Double-sided snowflake—rarely seen in nature!
8. Tape it to a window or hang it from a string (optional).
